Journal of Voice
Volume 9, 1995

Subject Index

Acoustic analysis
  fundamental frequency and perturbation measurements, three analysis systems, 383
  operatic singing, 249
  phonation, vocal stability and vocal tract configuration, 173
  vocal nodules, speech task effects, women, 413
  voice fatigue, 127
  voice samples, directly digitized *versus* taped, 378
Aerodynamic analysis
  vocal nodules, speech task effects, women, 413
  voice fatigue, 127
Affect vocalization, expression of emotion, voice and music, 235
Aging, phonational profiles, trained singers and nonsingers, male, 142
Alternative medicine, management of voice disorders and, 308
Anesthesia, subglottal pressure control, mechanoreceptors in, singers, 20
Arytenoid adduction, type I thyroplasty comparison, voice problems, 466

Bandwidths, formant frequencies and, measurement in singing, 290
Bias, examiner, perceptual ratings of videostroboscopy, case history effects, 95
Body position, effects on breathing, speech and voice disorders, 341
Book reviews
  Electromyographic and Laryngoscopic Studies of Normal and Disturbed Voice Function, 212
  Voice Therapy: Clinical Studies, 212
Botulinum toxin, treatment, adductor spasmodic dysphonia, 460
Breath management, supported singing voice, 45
Breath support, voice training effects, graduate students, 118
Breathing, body position effects on, speech and voice disorders, 341

Case history, effects on perceptual ratings, videostroposcopy, 95
Children, untrained voice, voice profile of, 304
Clinician, voice therapy, personality, ratings of voice treatment and, 261
Closed quotient, variation in, trained and untrained female singers, 163
Compensatory falsetto, vocal quality and, 439
Contact granuloma, sociodemographic variables of, 449
Contact quotient perturbation, changes, vocal effort level, 429
Cyst, vocal folds, stroboscopic signs of, 312

Dysphonia
  severity, sentence/vowel correlation in, 297
  spasmodic
    adductor, botulinum toxin and voice therapy in treatment of, 460
    electromyographic activity in, 3
    psychogenic, 270
  type I thyroplasty, comparison with arytenoid adduction, 466

Edema, vocal folds, stroboscopic signs of, 312
Electroglottography
  acoustic investigation and, vocal stability and vocal tract configuration, 173
  vocal-fold collision mass, low-pitch range, differentiation, 66
Electrolaryngography, variation of derived closed quotient, trained and untrained female singers, 163
Electromyography
  fundamental frequency and tracheal pressure, during three types of vocalization, anesthetized dogs, 403
  quantitative, spasmodic dysphonia, 3
Emotional expression
  operatic singing, 249
  voice and music, 235
Endoscopy, microsuture repair, vocal fold defects, 332
Exercise, isometric, vocal function, value in practice regimen of singers, 27
Feedback, practice effects, normally speaking women, 419
Formant, frequency
  measurements in singing, 290
  supported singing voice, 45
Frequency range, male and female trained and untrained subjects, phonetogram, 363
Fundamental frequency
  intraoral pressure change effects, vocal fold stiffness, 424
  patterns, three types of voice samples, 282
  perturbation measurements and, comparison among three analysis systems, 383
  repeated measures of, using visi-pitch, 156
  speaking
    phonation profiles in male singers and nonsingers, 142
    soprano singers, 134
  tracheal pressure and, three types of vocalization, anesthetized dogs, 403
  voice fatigue, objective measurements of, 127

Gastroesophageal reflux disease, laryngitis, omeprazole therapy, 205
Gender
  fundamental frequency perturbation, repeated measures of, 156
  male and female trained and untrained subjects, differences in phonetogram, 363
  male, trained singers and nonsingers, phonation profiles in, 142
  practice effects, jitter and shimmer levels, normally speaking women, 419
  variation in closed quotient, trained and untrained female singers, 163
  vocal fold closure, healthy middle-aged women, 182

vocal nodules, speech task effects, women, 413
Genetics, voice, 16
Glottal chink
anterior, voice fatigue measurement, 127
posterior, healthy middle-aged women, 182
Glottal configuration, changes after loud talking, women, 57
Glottal efficiency, vocal function exercises and, practice regimen of singers, 27
Glottal gaps, changes after loud talking, women, 57
Glottal noise, changes, vocal effort level, 429
Glottal stops, voice training effects, graduate students, 118

Heredity, genetics of voice, 16

Imagery, management of voice disorders, 308
Intraoral pressure, subglottal pressure comparison, measurements during phonation, 149
Inverse filtering
vocal fold closure, healthy middle-aged women, 182
vocal-fold collision mass, low-pitch range, differentiation, 66
Jitter
acoustic and electroglottographic assessment, vocal stability and vocal tract configuration, 173
changes, vocal effort level, 429
comparisons, directly digitized *versus* taped voice samples, 378
fundamental frequency perturbation
repeated measures of, 156
three analysis systems, 383
practice effects, normally speaking women, 419

Laryngeal microflap, vocal fold surgical technique, 198
Laryngeal webs, secondary to papillomatosis, 106
Laryngitis, reflux, omeprazole therapy for, 205
Laryngoscopy, Parkinson disease, 453
Laryngostroboscopy, Parkinson disease, 453
Larynx
chronic ozone exposure effects, Bonnet monkey, 443
contact granuloma, sociodemographic variables of, 449
fatigue, voice production and, objective measures, 127
glottal configuration changes, after loud talking, women, 57
muscles, during three types of vocalization, anesthetized dogs, 403
nodules
speech task effects, women, 413
stroboscopic signs of, 312
two methods of treatment, 74
open slope quotient, new photoglottographic parameter, canine, 86
papillomatosis, removal, laryngeal webs secondary to, 106
pathology, compensatory falsetto effects, 439
vocal-fold collision mass, low-pitch range, differentiation, 66

Massage, management of voice disorders, 308
Mechanoreceptors, subglottal pressure control and, singers, 20
Meditation, management of voice disorders, 308
Men. *see* Gender
Microsuture, endoscopic, repair of vocal fold defects, 332
Microwebs, vocal, surgery and, 326
Mindfulness, management of voice disorders, 308
Modeling, statistical, spasmodic dysphonia, electromyographic activity in, 3

Nodules
larynx, stroboscopic signs of, 312
vocal
microwebs and, surgery, 326
speech task effects, women, 413
vocal folds, stroboscopic signs of, 312
Nonverbal communication, expression of emotion, voice and music, 235

Obituaries, In memory of Ralph E. Becker, 1
Omeprazole, therapy for laryngitis, gastroesophageal reflux, 205
Opera performances, expression of emotion, acoustic analysis of, 249
Ozone, chronic exposure, effects on vocal fold mucosa, Bonnet monkey, 443

Papillomatosis, laryngeal, removal, laryngeal webs secondary to, 106
Parkinson disease, voice treatment in, 453
Personality, congruence, clinical and client, ratings of voice treatment, 261
Phonation
evoked, three types of vocalization, anesthetized dogs, 403
pressure measurements during, 149
type I thyroplasty comparison with arytenoid adduction, 466
vocal stability, vocal tract configuration and, 173
Phonation threshold pressure, what happens during vocal warm-up, 37
Phonation volume, vocal function exercises and, practice regimen of singers, 27
Phonational profiles, trained singers and nonsingers, male, 142
Phonetogram
differences, male and female trained and untrained subjects, 363
voice profile of untrained children, 304
Phonosurgery
laryngeal microflap, 198
voice production problems, 111
Photoglottography, open slope quotient, canine, 86
Piano tones, pitch discrimination of, reliability, 394
Pitch
discrimination, vowel and piano tones, 394
habitual, trained singers and nonsingers, male, 142
period detection, changes in vocal effort level, 429
Pitch perception, voice training effects, graduate students, 118
Polyps, vocal folds, stroboscopic signs of, 312
Practice, effects on jitter and shimmer levels, normally speaking women, 419
Psychogenic voice disorders, spasmodic dysphonia, 270

Reflux laryngitis, omeprazole therapy for, 205
Register, vocal-fold collision mass and, low-pitch range, differentiation, 66

S/Z radio test, voice training effects, graduate students, 118
Sentence, vowel correlation, severity of dysphonia, 297
Shimmer
acoustic and electroglottographic assessment, vocal stability and vocal tract configuration, 173
changes, vocal effort level, 429
comparisons, directly digitized *versus* taped voice samples, 378
fundamental frequency and perturbation measurements, three analysis systems, 383
practice effects, normally speaking women, 419
Signal-to-noise ratio, comparisons, directly digitized *versus* taped voice samples, 378
Singing
expression of emotion in voice, 235, 249
formant frequencies and bandwidths, measurement of, 290

operatic, emotional expression in, 249
practice regimen, vocal function exercise in, 27
soprano, speaking fundamental frequency in, 134
subglottal pressure control in, mechanoreceptors in, 20
teachers, voice problems in, 348
trained and untrained, female, variation of derived closed quotient, 163
trained singers and nonsingers, male, phonation profiles, 142
what happens during vocal warm-up, 37
Sociodemographic data, contact granuloma, 449
Soprano singers, speaking fundamental frequency in, 134
Sound intensity, male and female trained and untrained subjects, phonetogram, 363
Spasmodic dysphonia
adductor, botulinum toxin and voice therapy in treatment of, 460
electromyographic activity in, 3
psychogenic, 270
Speaking, fundamental frequency
soprano singers, 134
trained singers and nonsingers, 142
Spectral analysis, supported singing voice, 45
Speech disorders, body position effects on breathing, 341
Speech rate, pressure measurements, during phonation, 149
Stroboscopy, benign lesions, vocal folds, 312
Subglottal mucosa, pressure, control by mechanoreceptors, singers, 20
Subglottal pressure
control by mechanoreceptors, singers, 20
intraoral pressure comparison, measurements during phonation, 149
supported singing voice, physiological characteristics, 45
what happens during vocal warm-up, 37
Surgery
endoscopic microsuture repair, vocal fold defects, 332
laryngeal mini-microflap, 198
nodules, microwebs and, 326
voice science impact on voice care, 215

Teachers of singing, voice problems in, 348
Thyroplasty, type I, arytenoid adduction comparison, 466
Towne-Heuer Reading Passage, voice training effects, graduate students, 118
Tracheal pressure, fundamental frequency and, three types of vocalization, anesthetized dogs, 403
Transglottal airflow, vocal fold closure, healthy middle-aged women, 182
Transglottal pressure, fundamental frequency effects, vocal fold stiffness, 424

Vibrato, formant frequencies and bandwidths, measurement in singing, 290
Videostroboscopy
glottal configuration changes, after loud talking, women, 57
perceptual ratings of, patient history effects, 95
vocal fold closure, healthy middle-aged women, 182
voice fatigue, 127
Visi-pitch, vocal fundamental frequency perturbation using, 156
Vocal attrition, speaking fundamental frequency, soprano singers, 134
Vocal efficiency, trained and untrained singers, female, variation of derived closed quotient, 163
Vocal effort, changes in level, vocal function during, 429
Vocal fatigue
after loud talking, changes in glottal configuration, women, 57
voice production and, objective measures, 127
Vocal folds
benign lesions, stroboscopic signs of, 312
closure, healthy middle-aged women, 182
defects, endoscopic microsuture repair of, 332
mucosa, chronic ozone exposure effects, Bonnet monkey, 443
paralysis
fundamental frequency patterns, 282
phonosurgery for, 111
stiffness, intraoral pressure change effects on fundamental frequency, 424
surgical technique, laryngeal microflap, 198
what happens during vocal warm-up, 37
Vocal function exercise, practice regimen of singers, 27
Vocal intensity, phonation profiles, trained singers and nonsingers, male, 142
Vocal nodules
microwebs and, surgery, 326
speech task effects, women, 413
Vocal perturbation, acoustic and electroglottographic investigation, 173
Vocal quality, compensatory falsetto effects, 439
Vocal tract, resonance, measurement in singing, 290
Vocal variability, comfortable effort level, 282
Vocalization, three types, fundamental frequency and tracheal pressure during, anesthetized dogs, 403
Voice care, impact of voice science on, 215
Voice curriculum integration, training effects, graduate students, 118
Voice differences, male and female trained and untrained subjects, phonetogram, 363
Voice disorders
body position effects, breathing, 341
management, alternative medicine role in, 308
psychogenic, 270
standard of care for, 215
sustained vowel evaluation, severity of dysphonia, 297
type I thyroplasty, arytenoid adduction comparison, 465
Voice improvement, phonosurgery for, 111
Voice problems, singing teachers, 348
Voice production
emotion effects on, 235
open slope quotient, new photoglottographic parameter, canine, 86
videostroboscopy, perceptual ratings of, case history effects, 95
vocal-fold collision mass and registers, low-pitch range, 66
Voice profile, untrained children, 304
Voice quality, vocal fold closure, healthy middle-aged women, 182
Voice research, genetics, 16
Voice science, impact on voice care, 215
Voice support, supported singing voice, 45
Voice therapy
botulinum toxin treatment and, adductor spasmodic dysphonia, 460
Parkinson disease, 453
ratings, personality between client and clinician, 261
two methods, treatment for laryngeal nodules, 74
Voice training, clinical and perceptual skills of graduate students, speech-language pathology, 118
Vowel production, vocal stability, vocal tract configuration and, 173
Vowel tones, pitch discrimination of, reliability, 394
Vowels, sentence correlation, severity of dysphonia, 297

Warm-up, vocal, 37
Women. *see* Gender
